DETAILED ACTION

Status of the claims

1. Currently claims 1-5 and 9-11 are pending.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. **Claims 1-5 and 9-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Kishida et al., (Kishida), US 2003/0156247.**

The applied reference has a common assignee with the instant application.

Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in

the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Kishida discloses (more specifically in abstract; paragraph's 0071, 0220, 0252, 0291-0298) and shows in Figs. 1-6, a method for producing a liquid crystal display device comprising the steps of:

- sealing a liquid crystal containing a polymerizable component capable of being polymerized with heat or light between a pair of substrates having been disposed as being opposed to each other; and
- polymerizing the polymerizable component by irradiating the liquid crystal with light of a luminance of 50mW/cm² or more at a room temperature for an irradiating time of 100 seconds under application of a voltage of 5V so as to control a pretilt angle and a tilt direction of liquid crystal molecules.

wherein the voltage or the temperature or the luminance or the irradiation time is controlled as a parameter to compensate a luminance distribution within the panel and to obtain prescribed optical characteristics that include gamma characteristics and a transmittance upon displaying black.

Accordingly, claims 1-5, 10 and 11 are anticipated.

As to claim 9, Kishida also discloses controlling the parameter under feedback of a cell thickness before and after injecting the liquid crystal.

Conclusion

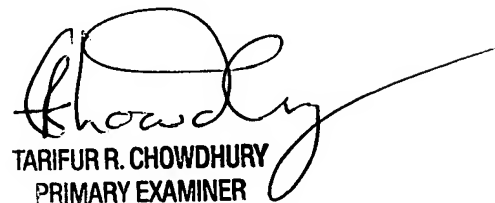

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
